

Ravi Mali

Frontend & Future Full Stack Engineer

ravimalakar091@gmail.com | github.com/ravimalakar | linkedin.com/in/ravimalakar | ravi-mali-portfolio.com

PROFESSIONAL SUMMARY

Results-driven, ambitious Frontend & Future Full Stack Engineer with proven mastery in component-driven React architectures, modern layout engines (Tailwind CSS, Glassmorphism, Motion), and full-stack backend APIs. Excellent technical communicator with practical internship experience designing state-persistent databases, robust routing modules, and seamless interactive user interfaces designed to maximize retention and developer efficiency.

PROFESSIONAL EXPERIENCE

Software Developer Intern June 2025 - Dec 2025
TechNova Solutions

- Collaborated on designing and engineering high-fidelity React frontend components using Tailwind CSS utility frameworks.
- Developed modular, scalable REST APIs using Express.js and authenticated database storage configurations.
- Integrated secure state verification routines, ensuring standard guidelines for modern interactive interfaces were enforced.
- Maintained version controls and rigorous code reviews in collaborative, sprint-driven environments using GitHub workflows.

TECHNICAL SKILLS

Frontend Development: React, React 19, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS v4, Motion, Glassmorphism
Backend Engineering: Node.js, Express.js, JWT Payloads, RESTful APIs, Secure Credentials Validation
Database Systems: MongoDB, MySQL, Firestore, SQL Query Seeding & Relational Schemas
Tools & Workflows: Git, GitHub Actions, VS Code, Postman, SSH Auth, Docker Container Basics

SELECTED PROJECTS

Interactive AI-Twin Developer Portfolio [React, Express.js, Gemini 3.5, Tailwind CSS, Motion]
Architected a futuristic dark-themed developer portfolio integrating fully dynamic GitHub SSH contribution heatmaps, server-persisted recruiter log databases, and secure side-car AI assistant proxies.

PulseFlow: Task Management Developer Panel [React, Motion, Tailwind CSS, SVG Chart Engine, LocalStorage]
Designed and implemented a modular team analytics workspace displaying active task counts, system operations gauges, collaborative kanban columns, and real-time interactive Gantt modules.

GuardVault: Token-Backed Credentials Auth [React, Node.js, Express.js, MongoDB, JWT Web Tokens]
Engineered a robust credential security gate demonstrating modern client forms validation, responsive password-strength bars, session middleware, and secure cookie endpoints.

EDUCATION & CERTIFICATIONS

Bachelor of Technology (B.Tech) in Computer Science & Engineering Expected Grad: May 2026
Core Coursework: Software Engineering, Data Structures & Algorithms, Database Systems, Web Architectures
